# Modbus Communication:

Optima 250, Design Panel SW 2.3 with MODBUS.

A Modbus network consists of one Master unit and one or more Slave units. The master controls the communication and requests information from the slave units. The rules for communication are set by the protocol. The Modbus protocol specification can be downloaded for free from the Modbus Organization. www.modbus.org

Connection.

Screened twisted pair cable should be used 2x2x0,25mm². The cable screen should be connected to the "Gnd" terminal. The cable should be terminated at each end with a 150 ohm resistor and "Daisy Chain" or "straight line" connection should be used. A "Star" or network with "Stubs (Tees)" is not recommended as reflection within the cable may result in data corruption.
